

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1 1. (Currently amended) A method for managing a database system,
2 | wherein the database system has a ~~plurality of administrators~~ and security officers,
3 | comprising:
4 receiving a command to perform an administrative function involving an
5 object defined within the database system;
6 determining if the object is a sensitive object that is associated with
7 security functions in the database system, wherein the sensitive object is encrypted
8 in the database system, wherein the sensitive object can include a sensitive row
9 within a table in the database system, wherein the sensitive row contains sensitive
10 data, and wherein other rows in the table need not contain sensitive data;
11 wherein the sensitive object is an object that represents a sensitive user of
12 the database system who is empowered to access sensitive data;
13 | wherein ~~at least one of the plurality of administrators is a security officer~~
14 | ~~who can perform administrative functions on sensitive objects;~~
15 wherein an administrator ~~in the plurality of administrators who is not a~~
16 ~~security officer~~ cannot perform administrative functions on sensitive objects;
17 wherein an administrator ~~in the plurality of administrators who is not a~~
18 ~~security officer~~ cannot become a sensitive user and thereby obtain access to
19 sensitive objects indirectly;
20 if the object is not a sensitive object, and if the command to perform an
21 | administrative function is received from an administrator ~~who is not a security~~
22 | ~~officer~~, allowing the administrative function to proceed; and

23 if the object is a sensitive object, and if the command is received from an
24 | administrator ~~who is not a security officer~~, disallowing the administrative
25 function.

1 2. (Previously presented) The method of claim 1, further comprising:
2 receiving a request to perform an operation on a data item in the database
3 system;
4 if the data item is a sensitive data item containing sensitive information
5 and if the request is received from a sensitive user who is empowered to access
6 sensitive data, allowing the operation to proceed if the sensitive user has access
7 rights to the sensitive data item; and
8 if the data item is a sensitive data item and the request is received from a
9 user who is not a sensitive user, disallowing the operation.

1 3. (Original) The method of claim 2, wherein if the data item is a sensitive
2 data item, if the operation is allowed to proceed, and if the operation involves
3 retrieval of the data item, the method further comprises decrypting the data item
4 using an encryption key after the data item is retrieved.

1 4. (Original) The method of claim 3, wherein the encryption key is stored
2 along with a table containing the data item.

1 5. (Original) The method of claim 4, wherein the encryption key is stored
2 in encrypted form.

1 6 (Canceled).

1 7. (Original) The method of claim 1, wherein if the object is not a sensitive
2 object, and if the command to perform the administrative function is received
3 from a security officer, the method further comprises allowing the security officer
4 to perform the administrative function on the object.

1 8. (Original) The method of claim 1,
2 wherein the database system includes a number of sensitive data items;
3 and
4 wherein only specific sensitive users are allowed to access a given
5 sensitive data item.

1 9. (Currently amended) A computer-readable storage medium storing
2 instructions that when executed by a computer cause the computer to perform a
3 method for managing a database system, wherein the database system has a
4 plurality of administrators and security officers, the method comprising:
5 receiving a command to perform an administrative function involving an
6 object defined within the database system;
7 determining if the object is a sensitive object that is associated with
8 security functions in the database system, wherein the sensitive object is encrypted
9 in the database system, wherein the sensitive object can include a sensitive row
10 within a table in the database system, wherein the sensitive row contains sensitive
11 data, and wherein other rows in the table need not contain sensitive data;
12 wherein the sensitive object is an object that represents a sensitive user of
13 the database system who is empowered to access sensitive data;
14 wherein ~~at least one of the plurality of administrators is a security officer~~
15 ~~who can perform administrative functions on sensitive objects;~~

16 wherein an administrator in the plurality of administrators who is not a
17 ~~security officer~~ cannot perform administrative functions on sensitive objects;
18 wherein an administrator in the plurality of administrators who is not a
19 ~~security officer~~ cannot become a sensitive user and thereby obtain access to
20 sensitive objects indirectly;
21 if the object is not a sensitive object, and if the command is received from
22 an administrator who is not a ~~security officer~~, allowing the administrative function
23 to proceed; and
24 if the object is a sensitive object, and if the command is received from an
25 administrator-system who is not a ~~security officer~~, disallowing the administrative
26 function.

1 10. (Previously presented) The computer-readable storage medium of
2 claim 9, wherein the method further comprises:
3 receiving a request to perform an operation on a data item in the database
4 system;
5 if the data item is a sensitive data item containing sensitive information
6 and if the request is received from a sensitive user who is empowered to access
7 sensitive data, allowing the operation to proceed if the sensitive user has access
8 rights to the sensitive data item; and
9 if the data item is a sensitive data item and the request is received from a
10 user system who is not a sensitive user, disallowing the operation.

1 11. (Original) The computer-readable storage medium of claim 10,
2 wherein if the data item is a sensitive data item, if the operation is allowed to
3 proceed, and if the operation involves retrieval of the data item, the method

4 further comprises decrypting the data item using an encryption key after the data
5 item is retrieved.

1 12. (Original) The computer-readable storage medium of claim 11,
2 wherein the encryption key is stored along with a table containing the data item.

1 13. (Original) The computer-readable storage medium of claim 12,
2 wherein the encryption key is stored in encrypted form.

1 14 (Canceled).

1 15. (Original) The computer-readable storage medium of claim 9, wherein
2 if the object is not a sensitive object, and if the command to perform the
3 administrative function is received from a security officer, the method further
4 comprises allowing the security officer to perform the administrative function.

1 16. (Original) The computer-readable storage medium of claim 9,
2 wherein the database system includes a number of sensitive data items;
3 and
4 wherein only specific sensitive users are allowed to access a given
5 sensitive data item.

1 17. (Currently amended) An apparatus for managing a database system,
2 wherein the database system has a plurality of administrators and security officers,
3 comprising:

4 a command receiving mechanism that is configured to receive a command
5 to perform an administrative function involving an object defined within the
6 database system;
7 an execution mechanism that is configured to,
8 determine if the object is a sensitive object that is
9 associated with security functions in the database system, wherein
10 the sensitive object is encrypted in the database system, wherein
11 the sensitive object can include a sensitive row within a table in the
12 database system, wherein the sensitive row contains sensitive data,
13 and wherein other rows in the table need not contain sensitive data,
14 wherein the sensitive object is an object that represents a sensitive
15 user of the database system who is empowered to access sensitive
16 data;
17 ~~wherein at least one of the plurality of administrators is a security officer~~
18 ~~who can perform administrative functions on sensitive objects;~~
19 ~~wherein an administrator in the plurality of administrators who is not a~~
20 ~~security officer cannot perform administrative functions on sensitive objects;~~
21 ~~wherein an administrator in the plurality of administrators who is not a~~
22 ~~security officer cannot become a sensitive user and thereby obtain access to~~
23 sensitive objects indirectly;
24 allow the administrative function to proceed, if the object is
25 not a sensitive object, and if the command is received from an
26 ~~administrator who is not a security officer,~~ and to
27 disallow the administrative function, if the object is the
28 sensitive object, and if the command is received from an
29 ~~administrator who is not a security officer.~~

1 18. (Previously presented) The apparatus of claim 17,
2 wherein the command receiving mechanism is configured to receive a
3 request to perform an operation on a data item in the database system;
4 wherein the execution mechanism is configured to,
5 allow the operation to proceed, if the data item is a
6 sensitive data item, if the request is received from a sensitive user
7 who is empowered to access sensitive data, and if the sensitive user
8 has access rights to the sensitive data item, and to
9 disallow the operation, if the data item is a sensitive data
10 item, and if the request is received from a user who is not a
11 sensitive user.

1 19. (Original) The apparatus of claim 18, further comprising a decryption
2 mechanism, wherein if the data item is a sensitive data item, if the operation is
3 allowed to proceed, and if the operation involves retrieval of the data item, the
4 decryption mechanism is configured to decrypt the data item using an encryption
5 key after the data item is retrieved

1 20. (Original) The apparatus of claim 19, wherein the encryption key is
2 stored along with a table containing the data item.

1 21. (Original) The apparatus of claim 20, wherein the encryption key is
2 stored in encrypted form.

1 22 (Canceled).

1 23. (Original) The apparatus of claim 17, wherein if the object is not a
2 sensitive object, and if the command to perform the administrative function is
3 received from a security officer, the execution mechanism is configured to allow
4 the security officer to perform the administrative function.

1 24. (Original) The apparatus of claim 17,
2 wherein the database system includes a number of sensitive data items;
3 and
4 wherein only specific sensitive users are allowed to access a given
5 sensitive data item.

1 25. (Currently amended) A method for managing a database system which
2 has administrators and security officers, comprising:
3 receiving a command to perform an administrative function involving an
4 object defined within the database system;
5 determining if the object is a sensitive object that is associated with
6 security functions in the database system, wherein the sensitive object is an object
7 that represents a sensitive user of the database system who is empowered to access
8 sensitive data;
9 ~~wherein at least one of the plurality of administrators is a security officer~~
10 ~~who can perform administrative functions on sensitive objects;~~
11 ~~wherein an administrator in the plurality of administrators who is not a~~
12 ~~security officer cannot perform administrative functions on sensitive objects;~~
13 ~~wherein an administrator in the plurality of administrators who is not a~~
14 ~~security officer cannot become a sensitive user and thereby obtain access to~~
15 sensitive objects indirectly;

16 if the object is not a sensitive object, and if the command is received from
17 | a database administrator ~~who is not a security officer~~, allowing the administrative
18 | function to proceed; and
19 | if the object is a sensitive object, and if the command is received from an
20 | ~~system administrator who is not a security officer~~, disallowing the administrative
21 | function.

1 26. (Previously presented) The method of claim 25, further comprising:
2 receiving a request to perform an operation on a data item in the database
3 | system;
4 if the data item is a sensitive data item containing sensitive information
5 | and if the request is received from a sensitive user who is empowered to access
6 | sensitive data, allowing the operation to proceed if the sensitive user has access
7 | rights to the sensitive data item; and
8 if the data item is a sensitive data item and the request is received from a
9 | user who is not a sensitive user, disallowing the operation.

1 27. (Previously presented) The method of claim 26, wherein if the data
2 | item is a sensitive data item, if the operation is allowed to proceed, and if the
3 | operation involves retrieval of the data item, the method further comprises
4 | decrypting the data item using an encryption key after the data item is retrieved.

1 28. (Previously presented) The method of claim 27, wherein the encryption
2 | key is stored along with a table containing the data item.

1 29. (Previously presented) The method of claim 28, wherein the encryption
2 | key is stored in encrypted form.

1 30. (Previously presented) The method of claim 25, wherein the sensitive
2 object can include one of:
3 a sensitive table containing sensitive data in the database system;
4 a sensitive row within a table in the database system, wherein the sensitive
5 row contains sensitive data; and
6 an object that represents a sensitive user of the database system who is
7 empowered to access sensitive data.

1 31. (Previously presented) The method of claim 25, wherein if the object is
2 not a sensitive object, and if the command to perform the administrative function
3 is received from a security officer, the method further comprises allowing the
4 security officer to perform the administrative function on the object.

1 32. (Previously presented) The method of claim 25,
2 wherein the database system includes a number of sensitive data items;
3 and
4 wherein only specific sensitive users are allowed to access a given
5 sensitive data item.

1 33. (Currently amended) A computer-readable storage medium storing
2 instructions that when executed by a computer cause the computer to perform a
3 method for managing a database system which has administrators and security
4 officers, the method comprising:
5 receiving a command to perform an administrative function involving an
6 object defined within the database system;
7 determining if the object is a sensitive object that is associated with
8 security functions in the database system, wherein the sensitive object is an object

9 that represents a sensitive user of the database system who is empowered to access
10 sensitive data;
11 wherein ~~at least one of the plurality of administrators is a security officer~~
12 ~~who can perform administrative functions on sensitive objects;~~
13 wherein an administrator ~~in the plurality of administrators who is not a~~
14 ~~security officer cannot perform administrative functions on sensitive objects;~~
15 wherein an administrator ~~in the plurality of administrators who is not a~~
16 ~~security officer cannot become a sensitive user and thereby obtain access to~~
17 sensitive objects indirectly;
18 if the object is not a sensitive object, and if the command is received from
19 ~~an database administrator who is not a security officer,~~ allowing the
20 administrative function to proceed; and
21 if the object is a sensitive object, and if the command is received from an
22 ~~system administrator who is not a security officer,~~ disallowing the administrative
23 function.

1 34. (Previously presented) The computer-readable storage medium of
2 claim 33, wherein the method further comprises:
3 receiving a request to perform an operation on a data item in the database
4 system;
5 if the data item is a sensitive data item containing sensitive information
6 and if the request is received from a sensitive user who is empowered to access
7 sensitive data, allowing the operation to proceed if the sensitive user has access
8 rights to the sensitive data item; and
9 if the data item is a sensitive data item and the request is received from a
10 user who is not a sensitive user, disallowing the operation.

1 35. (Previously presented) The computer-readable storage medium of
2 claim 34, wherein if the data item is a sensitive data item, if the operation is
3 allowed to proceed, and if the operation involves retrieval of the data item, the
4 method further comprises decrypting the data item using an encryption key after
5 the data item is retrieved.

1 36. (Previously presented) The computer-readable storage medium of
2 claim 35, wherein the encryption key is stored along with a table containing the
3 data item.

1 37. (Previously presented) The computer-readable storage medium of
2 claim 36, wherein the encryption key is stored in encrypted form.

1 38. (Previously presented) The computer-readable storage medium of
2 claim 33, wherein the sensitive object can include one of:
3 a sensitive table containing sensitive data in the database system;
4 a sensitive row within a table in the database system, wherein the sensitive
5 row contains sensitive data; and
6 an object that represents a sensitive user of the database system who is
7 empowered to access sensitive data.

1 39. (Previously presented) The computer-readable storage medium of
2 claim 33, wherein if the object is not a sensitive object, and if the command to
3 perform the administrative function is received from a security officer, the method
4 further comprises allowing the security officer to perform the administrative
5 function.

1 40. (Previously presented) The computer-readable storage medium of
2 claim 33,
3 wherein the database system includes a number of sensitive data items;
4 and
5 wherein only specific sensitive users are allowed to access a given
6 sensitive data item.

1 41. (Currently amended) An apparatus for managing a database system
2 which has administrators and security officers, comprising:
3 a command receiving mechanism that is configured to receive a command
4 to perform an administrative function involving an object defined within the
5 database system;
6 wherein ~~at least one of the plurality of administrators is a security officer~~
7 ~~who can perform administrative functions on sensitive objects;~~
8 wherein an administrator in the plurality of administrators ~~who is not a~~
9 ~~security officer cannot perform administrative functions on sensitive objects;~~
10 wherein an administrator in the plurality of administrators ~~who is not a~~
11 ~~security officer cannot become a sensitive user and thereby obtain access to~~
12 sensitive objects indirectly;
13 an execution mechanism that is configured to,
14 determine if the object is a sensitive object that is
15 associated with security functions in the database system, wherein
16 the sensitive object is an object that represents a sensitive user of
17 the database system who is empowered to access sensitive data,
18 allow the administrative function to proceed, if the object is
19 not a sensitive object, and if the command is received from an
20 administrator ~~who is not a security officer~~, and to

21 disallow the administrative function, if the object is a
22 sensitive object, and if the command is received from an
23 administrator ~~who is not a security officer.~~

1 42. (Previously presented) The apparatus of claim 41,
2 wherein the command receiving mechanism is configured to receive a
3 request to perform an operation on a data item in the database system;
4 wherein the execution mechanism is configured to,
5 allow the operation to proceed, if the data item is a sensitive data item, if
6 the request is received from a sensitive user who is empowered to access sensitive
7 data, and if the sensitive user has access rights to the sensitive data item, and to
8 disallow the operation, if the data item is a sensitive data item, and if the
9 request is received from a user who is not a sensitive user.

1 43. (Previously presented) The apparatus of claim 42, further comprising a
2 decryption mechanism, wherein if the data item is a sensitive data item, if the
3 operation is allowed to proceed, and if the operation involves retrieval of the data
4 item, the decryption mechanism is configured to decrypt the data item using an
5 encryption key after the data item is retrieved

1 44. (Previously presented) The apparatus of claim 43, wherein the
2 encryption key is stored along with a table containing the data item.

1 45. (Previously presented) The apparatus of claim 44, wherein the
2 encryption key is stored in encrypted form.

1 46. (Previously presented) The apparatus of claim 41, wherein the
2 sensitive object can include one of:
3 a sensitive table containing sensitive data in the database system;
4 a sensitive row within a table in the database system, wherein the sensitive
5 row contains sensitive data; and
6 an object that represents a sensitive user of the database system who is
7 empowered to access sensitive data.

1 47. (Previously presented) The apparatus of claim 41, wherein if the object
2 is not a sensitive object, and if the command to perform the administrative
3 function is received from a security officer, the execution mechanism is
4 configured to allow the security officer to perform the administrative function.

1 48. (Previously presented) The apparatus of claim 41,
2 wherein the database system includes a number of sensitive data items;
3 and
4 wherein only specific sensitive users are allowed to access a given
5 sensitive data item.
